

ZKGREENPASS

QR Code Reader solution to verify
EU Digital COVID Certificate

ZKGREENPASS

ZKTeco launches ZK-GreenPass QR Code Reader solution for Access Control! As you know the EU Digital COVID Certificate is helping to ensure that restrictions currently in place can be lifted in a coordinated manner. In order to obtain the new EU Digital COVID Certificate pass, people must have proof they are fully vaccinated, recently tested negative, or recently recovered from the virus. These passports are usually accessed via an app on your phone, or paper versions are also available.

ZKTeco has incorporated the ZK-GreenPass QR Code scanning solution to its latest biometrics access control products to quickly verify that an EU Digital COVID Certificate is valid, easing reception and security staff processes.

Highlights

- Entrance relay to access doors, activate turnstiles or acoustic alarms.
- Plug & Play QR Code readers.
- Supports all EU countries QR codes.
- Real-time query into the EU database.
- Investment protection: Future proof Access Control & Time Attendance solutions.
- Ensures proper authorization of users entering and exiting facilities.
- Guarantees the confidentiality of individuals (not storing any data).

Devices

ZK-GreenPASS is available for ZKTeco's Access Control devices, such as ZPad Plus QR, SpeedFace-V5L QR, or ZPad Plus 4G, and can easily be integrated with most of ZKTeco's turnstiles or speed gates for visitor management in business or office buildings with constant flows of people. When the QR Code verification process is completed, the access control turnstiles or speed gates allow or block entry to the person who presented the valid or expired EU Digital COVID Certificate.
